

# Make Your Own Crazy Song

Struggling to remember a maths fact? Make up a silly poem or song about it!

- Some people find music and rhythm really helps them to remember. Add some actions to go with the words, being a bit silly can help too!
- You could ask an adult to help. Why not get them to sing it to you? That really will be something to remember!
- Here's an example for learning about converting between metres, centimetres and millimetres.

## The Length Poem

Peter Millimetre is a tiny grain of sand,

Rita Centimetre is the width of a finger on your hand,

Dita the Metre is the width of a doorway in your home,

Cheetah Kilometre is going on a long roam,

10 times, 100 times, 1000 times bigger!
