

# The Amazing $9 \times$ Table Trick

Impress your friends with this clever way of finding the answer to  $9 \times$  table questions. Just follow these simple instructions.

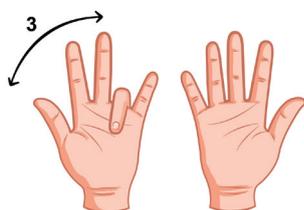

## What to do

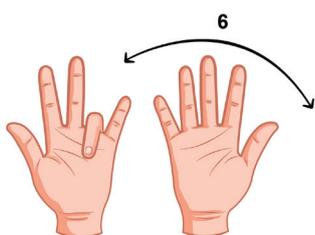

1. Hold out both hands in front of you.

2. To find  $4 \times 9$ , count in 4 fingers from the left, and hold down this finger.

3. Count all the fingers before the one that's held down – **3**. This is the first number in your answer.

4. Count all the fingers after the one that's held down – **6**. This is the last number of your answer.

So the answer to  $4 \times 9$  is **3 then 6... 36**

To find the answer to another  $9 \times$  table question, just hold down the correct finger and count the fingers on either side. So you hold down your 5th finger for  $5 \times 9$ , your 7th finger for  $7 \times 9$ , and so on.
