

Making calculations

1. Roll a die twice and write down the two numbers.

$$\square \quad \square$$

2. Use the numbers to make two addition calculations.

$$\square + \square =$$

$$\square + \square =$$

3. Now use the three numbers in the calculations above to make two subtraction calculations.

$$\square - \square = \square$$

$$\square - \square = \square$$

Remember that the largest number needs to come first in the subtraction calculations.
